

## **Vortragsankündigung**

**Donnerstag, den 25. Oktober 2012, 17.15 h  
Hörsaal III, Physik-Department, Garching**

**Spin-wave devices based on  
metamaterial concepts (TRR80)**

**Dr. Stefan Mendach**

*Institut für Angewandte Physik und Mikrostrukturforschungszentrum,  
Universität Hamburg*

### **Abstract**

Optical metamaterials with a hyperbolic light dispersion recently paved the way to novel devices, e.g., for light wave guiding [1], perfect imaging [2] or spontaneous emission enhancement [3]. Interestingly, spin waves travelling in thin ferromagnetic films - under certain conditions – exhibit such a hyperbolic dispersion, which offers the possibility to build the aforementioned metamaterial devices also for spin waves. In this talk I discuss, both, our recent progress in the area of optical metamaterials [4] and how we transfer metamaterial concepts to the research area of spin-wave optics [5].
